

Frequently Asked Questions

Title: 64bit Microsoft-signed drivers and Windows 10 “secure boot”

Date: Aug 2017

Card/Board/Module: 4000PCI and 4000PCle cards

Operating System: 64bit Windows 10

Question:

We have a requirement for 64bit Microsoft-signed drivers for use with Windows 10 “secure boot.”

Does Excalibur have compatible drivers?

Answer:

We now have drivers that fulfill this requirement.

They can be downloaded as filename hw-pci-winx64-Secure-Boot-Win10.zip at URL <http://www.mil-1553.com/kernel-drivers>.

This is the hardware installation disk to be used in the Device Manager, to install a driver for the Excalibur PCI or PCle card. In addition, you need to install software drivers for the individual modules on the card.

Please see our FAQ titled “Driver Support for Various Windows Operating Systems - 64bit Windows and running a 32bit EXE” at URL <http://www.mil-1553.com/faqs>.
